You are also expected to respond to surveys to the best of your knowledge.

From the this point until the end of the study, you will go through 6 steps, as following:

1- Follow the on-boarding tutorial for this study

2- Respond to the first short survey

3- Based on the provided task, navigate the visualized weather and farming data. Extract knowledge and insight to make several planting decisions. You will also take notes and respond to pop-up questions throughout the process.

4- Respond to the second short survey

5- Navigate< the dashboard and make decisions based on new task criteria provided.

6- Respond to the third short survey

Please do not close nor refresh this browser until the end of the study.

In this study, you will be provided with task criteria in the right panel of your screen. This criteria include:

1- The month you are making the decision

2- The land area and each area of each bed. A bed is a section in land where you actually plant the crops.

3- The type of crops planted in each bed in the previous three years (legumes, roots, greens or tubers).

The dashboard includes three main sections:

1- Weather data analysis (one filterable visual plot)

2- Crops information (farming calendar and technical) (several visual plots)

3- Companion Information (one filterable visual plot)

Keep in mind that sometimes you might get guidance at the bottom of the right panel. This guidance is automatically generated at some periods of the study.

Also, keep an eye out for the periodic one-question surveys that pops up above it, and respond to it as it appears.
